

Document Object Model (DOM) Level 2 HTML Specification

Version 1.0

W3C Recommendation 09 January 2003

This version:

http://www.w3.org/TR/2003/REC-DOM-Level-2-HTML-20030109

Latest version:

http://www.w3.org/TR/DOM-Level-2-HTML

Previous version:

http://www.w3.org/TR/2002/PR-DOM-Level-2-HTML-20021108

Editors:

Johnny Stenback, *Netscape*Philippe Le Hégaret, *W3C*Arnaud Le Hors, *W3C and IBM (until November 2000)*

Please refer to the errata for this document, which may include some normative corrections.

This document is also available in these non-normative formats: XML file, plain text, PostScript file, PDF file, single HTML file, and ZIP file.

See also translations of this document.

Abstract

This specification defines the Document Object Model Level 2 HTML, a platform- and language-neutral interface that allows programs and scripts to dynamically access and update the content and structure of [HTML 4.01] and [XHTML 1.0] documents. The Document Object Model Level 2 HTML builds on the Document Object Model Level 2 Core [DOM Level 2 Core] and is not backward compatible with DOM Level 1 HTML [DOM Level 1].

Status of this document

This section describes the status of this document at the time of its publication. Other documents may supersede this document. The latest status of this document series is maintained at the W3C.

This is the 09 January 2003 of "DOM Level 2 HTML". This document has been reviewed by W3C Members, software developers, and other W3C groups and interested parties, and has been endorsed by the Director as a W3C Recommendation. It is a stable document and may be used as reference material or cited as a normative reference from another document. W3C's role in making the Recommendation is to draw attention to the specification and to promote its widespread deployment. This document enhances the interoperability of the Web.

Patent disclosures relevant to this specification may be found on the Working Group's public patent disclosure page.

This document has been produced as part of the W3C DOM Activity. The authors of this document are the DOM Working Group participants.

The English version of this specification is the only normative version. Information about translations of this document is available at http://www.w3.org/2000/11/DOM-Level-2-translations.

The list of known errors in this document is available at http://www.w3.org/2000/11/DOM-Level-2-errata

Comments on this document are invited and are to be sent to the public mailing list www-dom@w3.org. An archive is available at http://lists.w3.org/Archives/Public/www-dom/.

An implementation report, based on the DOM Test Suite work, is available at http://www.w3.org/2002/11/DOM-Level-2-HTML-Results.

A list of current W3C Recommendations and other technical documents can be found at http://www.w3.org/TR.

Note: This specification renders the DOM Level 1 HTML Recommendation obsolete given that some changes from DOM Level 1 HTML are incompatible with that specification but represent more accurately the state of deployed software. W3C strongly suggests that developers and authors conform to DOM Level 2 HTML instead.

1. Document Object Model HTML

Editors:

Johnny Stenback, Netscape Philippe Le Hégaret, W3C Arnaud Le Hors, W3C and IBM (until November 2000)

1.1. Introduction

This section extends the DOM Level 2 Core API [DOM Level 2 Core] to describe objects and methods specific to *HTML* [p.127] documents [HTML 4.01], and XHTML documents [XHTML 1.0]. In general, the functionality needed to manipulate hierarchical document structures, elements, and attributes will be found in the core section; functionality that depends on the specific elements defined in HTML will be found in this section.

The goals of the HTML-specific DOM API are:

- to specialize and add functionality that relates specifically to HTML documents and elements.
- to address issues of backwards compatibility with the DOM Level 0 [p.127].
- to provide *convenience* [p.127] mechanisms, where appropriate, for common and frequent operations on HTML documents.

The key differences between the core DOM and the HTML application of DOM is that the HTML Document Object Model exposes a number of *convenience* [p.127] methods and properties that are consistent with the existing models and are more appropriate to script writers. In many cases, these enhancements are not applicable to a general DOM because they rely on the presence of a predefined DTD. The transitional or frameset DTD for HTML 4.01, or the XHTML 1.0 DTDs are assumed. Interoperability between implementations is only guaranteed for elements and attributes that are specified in the HTML 4.01 and XHTML 1.0 DTDs.

More specifically, this document includes the following specializations for HTML:

- An HTMLDocument [p.15] interface, derived from the core Document interface. HTMLDocument specifies the operations and queries that can be made on a HTML document.
- An HTMLElement [p.20] interface, derived from the core Element interface. HTMLElement specifies the operations and queries that can be made on any HTML element. Methods on HTMLElement include those that allow for the retrieval and modification of attributes that apply to all HTML elements.
- Specializations for all HTML elements that have attributes that extend beyond those specified in the HTMLElement [p.20] interface. For all such attributes, the derived interface for the element contains explicit methods for setting and getting the values.

The DOM Level 2 includes mechanisms to access and modify style specified through CSS and defines an event model that can be used with HTML documents.

The interfaces found within this section are not mandatory. A DOM application may use the hasFeature(feature, version) method of the DOMImplementation interface with parameter values "HTML" and "2.0" (respectively) to determine whether or not this module is supported by the implementation. In addition to the feature string "HTML", the feature string "XHTML" (version string "2.0") can be used to check if the implementation supports XHTML (this is equivalent to checking the features "XML" and "HTML"). In order to fully support this module, an implementation must also support the "Core" feature defined [DOM Level 2 Core]. Please refer to additional information about *conformance* in the DOM Level 2 Core specification [DOM Level 2 Core].

A DOM application can use the hasFeature method of the DOMImplementation interface to determine whether they are supported or not. The feature string for all the interfaces listed in this section is "HTML" and the version is "2.0". In order to fully support this feature, an implementation needs also to support the "Core" feature defined in the Document Object Model Level 2 Core [DOM Level 2 Core] (see also *Conformance*).

The interfaces in this specification are designed for [HTML 4.01] documents, as well as for [XHTML 1.0] documents.

Note: This specification does not intend to define exactly how a user agent will respond to a change to any attribute on an element that directly or indirectly references external data, such elements are HTMLAppletElement [p.47], HTMLFrameElement [p.59], HTMLFrameSetElement [p.59], HTMLIFrameElement [p.60], HTMLImageElement [p.43], HTMLLinkElement [p.22], HTMLObjectElement [p.44], HTMLParamElement [p.46], and HTMLScriptElement [p.49].

1.2. HTML Application of Core DOM

1.2.1. Naming Conventions

The HTML DOM follows a naming convention for properties, methods, events, collections, and data types. All names are defined as one or more English words concatenated together to form a single string.

1.2.1.1. Properties and Methods

The property or method name starts with the initial keyword in lowercase, and each subsequent word starts with a capital letter. For example, a property that returns document meta information such as the date the file was created might be named "fileDateCreated". In the ECMAScript binding, properties are exposed as properties of a given object. In Java, properties are exposed with get and set methods.

1.2.1.2. Non-HTML 4.0 interfaces and attributes

While most of the interfaces defined below can be mapped directly to elements defined in the HTML 4.01 Recommendation, some of them cannot. Similarly, not all attributes listed below have counterparts in the HTML 4.01 specification (and some do, but have been renamed to avoid conflicts with scripting languages). Interfaces and attribute definitions that have links to the HTML 4.0 specification have corresponding element and attribute definitions there; all others are added by this specification, either for convenience or backwards compatibility with *DOM Level 0* [p.127] implementations.

1.3. XHTML and the HTML DOM

The DOM HTML Level 1 API [DOM Level 1] were originally intended to be used only for HTML 4.01 documents [HTML 4.01]. The APIs were defined well before XHTML 1.0 [XHTML 1.0] became a specification, or before it was worked on by the HTML Working Group.

From the DOM point of view, The biggest difference between HTML 4.01 (and earlier) and XHTML 1.0 is that XHTML is case sensitive, whereas HTML 4.01 is case insensitive. The HTML case insensitivity is also reflected in the DOM HTML API. For instance, element and attribute names are exposed as all uppercase (for consistency) when used on an HTML document, regardless of the character case used in the markup. Since XHTML is based on XML, in XHTML everything is case sensitive, and element and attribute names must be lowercase in the markup.

Developers need to take two things into account when writing code that works on both HTML and XHTML documents. When comparing element or attribute names to strings, the string compare needs to be case insensitive, or the element or attribute name needs to be converted into lowercase before comparing against a lowercase string. Second, when calling methods that are case insensitive when used on a HTML document (such as getElementsByTagName() and namedItem()), the string that is passed in should be lowercase.

Note: The interfaces provided in this document are only for [HTML 4.01] and [XHTML 1.0] documents and are not guaranteed to work with any future version of XHTML.

1.4. Miscellaneous Object Definitions

Interface HTMLCollection

An HTMLCollection is a list of nodes. An individual node may be accessed by either ordinal index or the node's name or id attributes.

Note: Collections in the HTML DOM are assumed to be *live* [p.127] meaning that they are automatically updated when the underlying document is changed.

IDL Definition

Attributes

length of type unsigned long, readonly

This attribute specifies the length or *size* of the list.

Methods

item

This method retrieves a node specified by ordinal index. Nodes are numbered in tree order (depth-first traversal order).

Parameters

index of type unsigned long

The index of the node to be fetched. The index origin is 0.

Return Value

Node The Node at the corresponding position upon success. A value of null is returned if the index is out of range.

No Exceptions

namedItem

This method retrieves a Node using a name. With [HTML 4.01] documents, it first searches for a Node with a matching id attribute. If it doesn't find one, it then searches for a Node with a matching name attribute, but only on those elements that are allowed a name attribute. With [XHTML 1.0] documents, this method only searches for Nodes with a matching id attribute. This method is case insensitive in HTML documents and case sensitive in XHTML documents.

Parameters

name of type DOMString

The name of the Node to be fetched.

Return Value

Node The Node with a name or id attribute whose value corresponds to the specified string. Upon failure (e.g., no node with this name exists), returns null.

No Exceptions

Interface HTMLOptions Collection (introduced in DOM Level 2)

An HTMLOptionsCollection is a list of nodes representing HTML option element. An individual node may be accessed by either ordinal index or the node's name or id attributes.

Note: Collections in the HTML DOM are assumed to be *live* [p.127] meaning that they are automatically updated when the underlying document is changed.

IDL Definition

Attributes

length of type unsigned long

This attribute specifies the length or *size* of the list.

Exceptions on setting

DOMException

NOT_SUPPORTED_ERR: if setting the length is not allowed by the implementation.

Methods

item

This method retrieves a node specified by ordinal index. Nodes are numbered in tree order (depth-first traversal order).

Parameters

index of type unsigned long

The index of the node to be fetched. The index origin is 0.

Return Value

Node

The Node at the corresponding position upon success. A value of null is returned if the index is out of range.

No Exceptions

namedItem

This method retrieves a Node using a name. It first searches for a Node with a matching id attribute. If it doesn't find one, it then searches for a Node with a matching name attribute, but only on those elements that are allowed a name attribute. This method is case insensitive in HTML documents and case sensitive in XHTML documents.

Parameters

name of type DOMString

The name of the Node to be fetched.

Return Value

Node

The Node with a name or id attribute whose value corresponds to the specified string. Upon failure (e.g., no node with this name exists), returns null.

No Exceptions

1.5. Objects related to HTML documents

Interface HTMLDocument

An HTMLDocument is the root of the HTML hierarchy and holds the entire content. Besides providing access to the hierarchy, it also provides some *convenience* [p.127] methods for accessing certain sets of information from the document.

The following properties have been deprecated in favor of the corresponding ones for the BODY element:

- alinkColor
- background
- bgColor
- fgColor
- linkColor
- vlinkColor

Note: In DOM Level 2, the method getElementById is inherited from the Document interface where it was moved to.

IDL Definition

```
interface HTMLDocument : Document {
            attribute DOMString title;
 readonly attribute DOMString referrer readonly attribute DOMString domain; readonly attribute DOMString URL;
                                         referrer;
            attribute HTMLElement body;
  readonly attribute HTMLCollection images;
  readonly attribute HTMLCollection applets;
  readonly attribute HTMLCollection links;
  readonly attribute HTMLCollection forms;
  readonly attribute HTMLCollection anchors;
            attribute DOMString cookie;
                                              // raises(DOMException) on setting
  void
                        open();
  void
                       close();
 void write(in DOMString text);
void writeln(in DOMString text);
NodeList getElementsByName(in DOMString elementName);
};
```

Attributes

URL of type DOMString, readonly

The absolute URI [IETF RFC 2396] of the document.

anchors of type HTMLCollection [p.13], readonly

A collection of all the anchor (A) elements in a document with a value for the name attribute.

Note: For reasons of backward compatibility, the returned set of anchors only contains those anchors created with the name attribute, not those created with the id attribute. Note that in [XHTML 1.0], the name attribute (see section 4.10) has no semantics and is only present for legacy user agents: the id attribute is used instead. Users should prefer the iterator mechanisms provided by [DOM Level 2 Traversal] instead.

applets of type HTMLCollection [p.13], readonly

A collection of all the OBJECT elements that include applets and APPLET (*deprecated*) elements in a document.

body of type HTMLElement [p.20]

The element that contains the content for the document. In documents with BODY contents, returns the BODY element. In frameset documents, this returns the outermost FRAMESET element.

cookie of type DOMString

This mutable string attribute denotes persistent state information that (1) is associated with the current frame or document and (2) is composed of information described by the cookies non-terminal of [IETF RFC 2965], Section 4.2.2.

If no persistent state information is available for the current frame or document document, then this property's value is an empty string.

When this attribute is read, all cookies are returned as a single string, with each cookie's name-value pair concatenated into a list of name-value pairs, each list item being separated by a ';' (semicolon).

When this attribute is set, the value it is set to should be a string that adheres to the <code>cookie</code> non-terminal of [IETF RFC 2965]; that is, it should be a single name-value pair followed by zero or more cookie attribute values. If no domain attribute is specified, then the domain attribute for the new value defaults to the host portion of an absolute URI [IETF RFC 2396] of the current frame or document. If no path attribute is specified, then the path attribute for the new value defaults to the absolute path portion of the URI [IETF RFC 2396] of the current frame or document. If no max-age attribute is specified, then the max-age attribute for the new value defaults to a user agent defined value. If a cookie with the specified name is already associated with the current frame or document, then the new value as well as the new attributes replace the old value and attributes. If a max-age attribute of 0 is specified for the new value, then any existing cookies of the specified name are removed from the cookie storage.

Note: See [IETF RFC 2965] for the semantics of persistent state item attribute value pairs.

Note: The precise nature of a user agent session is not defined by this specification.

Exceptions on setting

DOMException SYNTAX_ERR: If the new value does not adhere to the cookie syntax specified by [IETF RFC 2965].

domain of type DOMString, readonly

The domain name of the server that served the document, or null if the server cannot be identified by a domain name.

forms of type HTMLCollection [p.13], readonly

A collection of all the forms of a document.

images of type HTMLCollection [p.13], readonly

A collection of all the IMG elements in a document. The behavior is limited to IMG elements for backwards compatibility.

Note: As suggested by [HTML 4.01], to include images, authors may use the OBJECT element or the IMG element. Therefore, it is recommended not to use this attribute to find the images in the document but getElementsByTagName with HTML 4.01 or getElementsByTagNameNS with XHTML 1.0.

links of type HTMLCollection [p.13], readonly

A collection of all AREA elements and anchor (A) elements in a document with a value for the href attribute.

referrer of type DOMString, readonly

Returns the URI [IETF RFC 2396] of the page that linked to this page. The value is an empty string if the user navigated to the page directly (not through a link, but, for example, via a bookmark).

title of type DOMString

The title of a document as specified by the TITLE element in the head of the document.

Methods

close

Closes a document stream opened by open () and forces rendering.

No Parameters

No Return Value

No Exceptions

getElementsByName

With [HTML 4.01] documents, this method returns the (possibly empty) collection of elements whose name value is given by elementName. In [XHTML 1.0] documents, this methods only return the (possibly empty) collection of form controls with matching name. This method is case sensitive.

Parameters

elementName of type DOMString

The name attribute value for an element.

Return Value

NodeList The matching elements.

No Exceptions

open

Open a document stream for writing. If a document exists in the target, this method clears it

Note: This method and the ones following allow a user to add to or replace the structure model of a document using strings of unparsed HTML. At the time of writing alternate methods for providing similar functionality for both HTML and XML documents were being considered (see [DOM Level 3 Load and Save]).

No Parameters No Return Value No Exceptions write

Write a string of text to a document stream opened by open (). Note that the function will produce a document which is not necessarily driven by a DTD and therefore might be produce an invalid result in the context of the document.

Parameters

text of type DOMString

The string to be parsed into some structure in the document structure model.

No Return Value

No Exceptions

writeln

Write a string of text followed by a newline character to a document stream opened by open(). Note that the function will produce a document which is not necessarily driven by a DTD and therefore might be produce an invalid result in the context of the document

Parameters

text of type DOMString

The string to be parsed into some structure in the document structure model.

No Return Value

No Exceptions

1.6. HTML Elements

1.6.1. Property Attributes

HTML attributes are exposed as properties on the element object. The DOM naming conventions always determine the name of the exposed property, and are independent of the case of the attribute in the source document. The data type of the property is in general determined by the type of the attribute as determined by the HTML 4.01 (transitional and frameset) and XHTML 1.0 DTDs. The attributes have the semantics (including case-sensitivity) given in the [HTML 4.01] and [XHTML 1.0] specifications.

The attributes are exposed as properties for compatibility with *DOM Level 0* [p.127]. This usage is deprecated because it can not be generalized to all possible attribute names for XML. We recommend the use of generic methods on the core Element interface for setting, getting and removing attributes.

DTD Data Type	Object Model Data Type
CDATA	DOMString
Value list (e.g., (left right center))	DOMString
one-value Value list (e.g., (disabled))	boolean
Number	long int

In an HTML document the return value of an attribute that has a data type that is a value list is normalized to lowercase (independent of the case of the value in the source document).

For example, if the value of the align attribute on a P element is "Left" (which is not a valid value in XHTML due to the case sensitivity of XHTML) then the value is returned as "left". For attributes with the CDATA data type, the case of the return value is that given in the source document.

The return value of an attribute that is unspecified and does not have a default value is the empty string if the return type is a DOMString, false if the return type is a boolean and 0 if the return type is a number.

1.6.2. Naming Exceptions

To avoid namespace conflicts, two attributes with the same name as a keyword in one of our chosen binding languages [p.127] were prefixed. The for attribute of the LABEL and SCRIPT elements collides with loop construct naming conventions and is renamed htmlFor. The class attribute of the HTML elements collides with class definitions naming conventions and is renamed className.

1.6.3. Exposing Element Type Names (tagName, (nodeName))

If the document is an HTML 4.01 document the element type names exposed through a property are in uppercase. For example, the body element type name is exposed through the tagName property as BODY. If the document is an XHTML 1.0 document the element name is exposed as it is written in the XHTML file. This means that the element type names are exposed in lowercase for XHTML documents since the XHTML 1.0 DTDs defines element type names as lowercase, and XHTML, being derived from XML, is case sensitive.

1.6.4. The HTMLElement interface

Interface HTMLElement

All HTML element interfaces derive from this class. Elements that only expose the HTML core attributes are represented by the base HTMLElement interface. These elements are as follows:

- special: SUB, SUP, SPAN, BDO
- font: TT, I, B, U, S, STRIKE, BIG, SMALL
- phrase: EM, STRONG, DFN, CODE, SAMP, KBD, VAR, CITE, ACRONYM, ABBR
- list: DD, DT
- NOFRAMES, NOSCRIPT
- ADDRESS, CENTER

Note: The style attribute of an HTML element is accessible through the ElementCSSInlineStyle interface which is defined in the CSS module [DOM Level 2 Style Sheets and CSS].

IDL Definition

```
interface HTMLElement : Element {
    attribute DOMString id;
    attribute DOMString title;
    attribute DOMString lang;
    attribute DOMString dir;
    attribute DOMString className;
};
```

Attributes

className of type DOMString

The class attribute of the element. This attribute has been renamed due to conflicts with the "class" keyword exposed by many languages. See the class attribute definition in HTML 4.01.

dir of type DOMString

Specifies the base direction of directionally neutral text and the directionality of tables. See the dir attribute definition in HTML 4.01.

id of type DOMString

The element's identifier. See the id attribute definition in HTML 4.01.

lang of type DOMString

Language code defined in RFC 1766. See the lang attribute definition in HTML 4.01.

title of type DOMString

The element's advisory title. See the title attribute definition in HTML 4.01.

1.6.5. Object definitions

Interface HTMLHtmlElement

Root of an HTML document. See the HTML element definition in HTML 4.01.

IDL Definition

Attributes

version of type DOMString

Version information about the document's DTD. See the version attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface *HTMLHeadElement*

Document head information. See the HEAD element definition in HTML 4.01.

IDL Definition

```
interface HTMLHeadElement : HTMLElement {
          attribute DOMString profile;
};
```

Attributes

```
profile of type DOMString
```

URI [IETF RFC 2396] designating a metadata profile. See the profile attribute definition in HTML 4.01.

Interface HTMLLinkElement

The LINK element specifies a link to an external resource, and defines this document's relationship to that resource (or vice versa). See the LINK element definition in HTML 4.01 (see also the LinkStyle interface in the StyleSheet module [DOM Level 2 Style Sheets and CSS]).

IDL Definition

Attributes

charset of type DOMString

The character encoding of the resource being linked to. See the charset attribute definition in HTML 4.01.

disabled of type boolean

Enables/disables the link. This is currently only used for style sheet links, and may be used to activate or deactivate style sheets.

href of type DOMString

The URI [IETF RFC 2396] of the linked resource. See the href attribute definition in HTML 4.01.

hreflang of type DOMString

Language code of the linked resource. See the hreflang attribute definition in HTML 4.01. media of type DOMString

Designed for use with one or more target media. See the media attribute definition in HTML 4.01.

rel of type DOMString

Forward link type. See the rel attribute definition in HTML 4.01.

rev of type DOMString

Reverse link type. See the rev attribute definition in HTML 4.01.

target of type DOMString

Frame to render the resource in. See the target attribute definition in HTML 4.01.

type of type DOMString

Advisory content type. See the type attribute definition in HTML 4.01.

Interface HTMLTitleElement

The document title. See the TITLE element definition in HTML 4.01.

IDL Definition

Attributes

text of type DOMString

The specified title as a string.

Interface HTMLMetaElement

This contains generic meta-information about the document. See the META element definition in HTML 4.01.

IDL Definition

```
interface HTMLMetaElement : HTMLElement {
    attribute DOMString content;
    attribute DOMString httpEquiv;
    attribute DOMString name;
    attribute DOMString scheme;
};
```

Attributes

content of type DOMString

Associated information. See the content attribute definition in HTML 4.01.

httpEquiv of type DOMString

HTTP response header name [IETF RFC 2616]. See the http-equiv attribute definition in HTML 4.01.

name of type DOMString

Meta information name. See the name attribute definition in HTML 4.01.

scheme of type DOMString

Select form of content. See the scheme attribute definition in HTML 4.01.

Interface HTMLBaseElement

Document base URI [IETF RFC 2396]. See the BASE element definition in HTML 4.01.

IDL Definition

Attributes

```
href of type DOMString
```

The base URI [IETF RFC 2396]. See the href attribute definition in HTML 4.01.

target of type DOMString

The default target frame. See the target attribute definition in HTML 4.01.

Interface HTMLIsIndexElement

This element is used for single-line text input. See the ISINDEX element definition in HTML 4.01. This element is deprecated in HTML 4.01.

IDL Definition

Attributes

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

prompt of type DOMString

The prompt message. See the prompt attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLStyleElement

Style information. See the STYLE element definition in HTML 4.01, the CSS module [DOM Level 2 Style Sheets and CSS] and the LinkStyle interface in the StyleSheets module [DOM Level 2 Style Sheets and CSS].

IDL Definition

Attributes

disabled of type boolean

Enables/disables the style sheet.

media of type DOMString

Designed for use with one or more target media. See the media attribute definition in HTML 4.01.

type of type DOMString

The content type of the style sheet language. See the type attribute definition in HTML 4.01.

Interface HTMLBodyElement

The HTML document body. This element is always present in the DOM API, even if the tags are not present in the source document. See the BODY element definition in HTML 4.01.

IDL Definition

Attributes

aLink of type DOMString

Color of active links (after mouse-button down, but before mouse-button up). See the alink attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

background of type DOMString

URI [IETF RFC 2396] of the background texture tile image. See the background attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

bgColor of type DOMString

Document background color. See the bgcolor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

link of type DOMString

Color of links that are not active and unvisited. See the link attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
text of type DOMString
```

Document text color. See the text attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

vLink of type DOMString

Color of links that have been visited by the user. See the vlink attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLFormElement

The FORM element encompasses behavior similar to a collection and an element. It provides direct access to the contained form controls as well as the attributes of the form element. See the FORM element definition in HTML 4.01.

IDL Definition

```
interface HTMLFormElement : HTMLElement {
  readonly attribute HTMLCollection elements;
  readonly attribute long length;
    attribute DOMString name;
    attribute DOMString acceptCharset;
    attribute DOMString action;
    attribute DOMString enctype;
    attribute DOMString method;
```

```
attribute DOMString target;
void submit();
void reset();
};
```

Attributes

acceptCharset of type DOMString

List of character sets supported by the server. See the accept-charset attribute definition in HTML 4.01.

action of type DOMString

Server-side form handler. See the action attribute definition in HTML 4.01.

elements of type HTMLCollection [p.13], readonly

Returns a collection of all form control elements in the form.

enctype of type DOMString

The content type of the submitted form, generally "application/x-www-form-urlencoded". See the enctype attribute definition in HTML 4.01.

Note: The onsubmit even handler is not guaranteed to be triggered when invoking this method. The behavior is inconsistent for historical reasons and authors should not rely on a particular one.

length of type long, readonly

The number of form controls in the form.

method of type DOMString

HTTP method [IETF RFC 2616] used to submit form. See the method attribute definition in HTML 4.01.

name of type DOMString

Names the form.

target of type DOMString

Frame to render the resource in. See the target attribute definition in HTML 4.01.

Methods

reset

Restores a form element's default values. It performs the same action as a reset button.

No Parameters

No Return Value

No Exceptions

submit

Submits the form. It performs the same action as a submit button.

No Parameters

No Return Value

No Exceptions

Interface HTMLSelectElement

The select element allows the selection of an option. The contained options can be directly accessed through the select element as a collection. See the SELECT element definition in HTML 4.01.

IDL Definition

```
interface HTMLSelectElement : HTMLElement {
 readonly attribute DOMString type;
          attribute long
                                 selectedIndex;
          attribute DOMString
                                 value;
  // Modified in DOM Level 2:
          attribute unsigned long length;
                                   // raises(DOMException) on setting
 readonly attribute HTMLFormElement form;
  // Modified in DOM Level 2:
 readonly attribute HTMLOptionsCollection options;
          attribute boolean disabled; attribute boolean multiple;
          attribute DOMString name;
                         size;
          attribute long
          attribute long
                                  tabIndex;
 void
                   add(in HTMLElement element,
                    in HTMLElement before)
                                     raises(DOMException);
                   remove(in long index);
 void
 void
                   blur();
 void
                   focus();
};
```

Attributes

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

length of type unsigned long, modified in DOM Level 2

The number of options in this SELECT.

Exceptions on setting

DOMException NOT_SUPPORTED_ERR: if setting the length is not allowed by the implementation.

multiple of type boolean

If true, multiple OPTION elements may be selected in this SELECT. See the multiple attribute definition in HTML 4.01.

name of type DOMString

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

options of type HTMLOptionsCollection [p.14], readonly, modified in **DOM Level 2**The collection of OPTION elements contained by this element.

selectedIndex of type long

The ordinal index of the selected option, starting from 0. The value -1 is returned if no element is selected. If multiple options are selected, the index of the first selected option is

returned.

size of type long

Number of visible rows. See the size attribute definition in HTML 4.01.

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

type of type DOMString, readonly

The type of this form control. This is the string "select-multiple" when the multiple attribute is true and the string "select-one" when false.

value of type DOMString

The current form control value (i.e. the value of the currently selected option), if multiple options are selected this is the value of the first selected option.

Methods

add

Add a new element to the collection of OPTION elements for this SELECT. This method is the equivalent of the appendChild method of the Node interface if the before parameter is null. It is equivalent to the insertBefore method on the parent of before in all other cases. This method may have no effect if the new element is not an OPTION or an OPTGROUP.

Parameters

element of type HTMLElement [p.20]

The element to add.

before of type HTMLElement

The element to insert before, or null for the tail of the list.

Exceptions

DOMException

NOT_FOUND_ERR: Raised if before is not a descendant of the SELECT element.

No Return Value

blur

Removes keyboard focus from this element.

No Parameters

No Return Value

No Exceptions

focus

Gives keyboard focus to this element.

No Parameters

No Return Value

No Exceptions

remove

Remove an element from the collection of OPTION elements for this SELECT. Does nothing if no element has the given index.

Parameters

index of type long

The index of the item to remove, starting from 0.

No Return Value

No Exceptions

Interface HTMLOptGroupElement

Group options together in logical subdivisions. See the OPTGROUP element definition in HTML 4.01.

IDL Definition

Attributes

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

label of type DOMString

Assigns a label to this option group. See the label attribute definition in HTML 4.01.

Interface HTMLOptionElement

A selectable choice. See the OPTION element definition in HTML 4.01.

IDL Definition

```
interface HTMLOptionElement : HTMLElement {
  readonly attribute HTMLFormElement form;
  // Modified in DOM Level 2:
        attribute boolean defaultSelected;
  readonly attribute DOMString text;
  // Modified in DOM Level 2:
  readonly attribute long index;
        attribute boolean disabled;
        attribute DOMString label;
        attribute boolean selected;
        attribute DOMString value;
};
```

Attributes

defaultSelected of type boolean, modified in DOM Level 2

Represents the value of the HTML selected attribute. The value of this attribute does not change if the state of the corresponding form control, in an interactive user agent, changes. See the selected attribute definition in HTML 4.01.

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

index of type long, readonly, modified in DOM Level 2

The index of this OPTION in its parent SELECT, starting from 0.

label of type DOMString

Option label for use in hierarchical menus. See the label attribute definition in HTML 4.01. selected of type boolean

Represents the current state of the corresponding form control, in an interactive user agent. Changing this attribute changes the state of the form control, but does not change the value of the HTML selected attribute of the element.

text of type DOMString, readonly

The text contained within the option element.

value of type DOMString

The current form control value. See the value attribute definition in HTML 4.01.

Interface HTMLInputElement

Form control.

Note: Depending upon the environment in which the page is being viewed, the value property may be read-only for the file upload input type. For the "password" input type, the actual value returned may be masked to prevent unauthorized use. See the INPUT element definition in [HTML 4.01].

IDL Definition

```
interface HTMLInputElement : HTMLElement {
            attribute DOMString defaultValue;
            attribute boolean
                                        defaultChecked;
  readonly attribute HTMLFormElement form;
            attribute DOMString accept;
           attribute DOMString accessKey; attribute DOMString align; attribute DOMString alt; attribute boolean checked; attribute boolean disabled;
            attribute boolean
            attribute DOMString name; attribute boolean
  // Modified in DOM Level 2:
            attribute unsigned long size;
            attribute DOMString src;
            attribute long
                                        tabIndex;
  // Modified in DOM Level 2:
            attribute DOMString
                                       type;
            attribute DOMString
                                       useMap;
            attribute DOMString
                                         value;
  void
                       blur();
  void
                      focus();
  void
                      select();
  biov
                       click();
};
```

Attributes

accept of type DOMString

A comma-separated list of content types that a server processing this form will handle correctly. See the accept attribute definition in HTML 4.01.

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

alt of type DOMString

Alternate text for user agents not rendering the normal content of this element. See the alt attribute definition in HTML 4.01.

checked of type boolean

When the type attribute of the element has the value "radio" or "checkbox", this represents the current state of the form control, in an interactive user agent. Changes to this attribute change the state of the form control, but do not change the value of the HTML checked attribute of the INPUT element.

Note: During the handling of a click event on an input element with a type attribute that has the value "radio" or "checkbox", some implementations may change the value of this property before the event is being dispatched in the document. If the default action of the event is canceled, the value of the property may be changed back to its original value. This means that the value of this property during the handling of click events is implementation dependent.

defaultChecked of type boolean

When type has the value "radio" or "checkbox", this represents the HTML checked attribute of the element. The value of this attribute does not change if the state of the corresponding form control, in an interactive user agent, changes. See the checked attribute definition in HTML 4.01.

defaultValue of type DOMString

When the type attribute of the element has the value "text", "file" or "password", this represents the HTML value attribute of the element. The value of this attribute does not change if the contents of the corresponding form control, in an interactive user agent, changes. See the value attribute definition in HTML 4.01.

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

maxLength of type long

Maximum number of characters for text fields, when type has the value "text" or "password". See the maxlength attribute definition in HTML 4.01.

name of type DOMString

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

readOnly of type boolean

This control is read-only. Relevant only when type has the value "text" or "password". See the readonly attribute definition in HTML 4.01.

size of type unsigned long, modified in DOM Level 2

Size information. The precise meaning is specific to each type of field. See the size attribute definition in HTML 4.01.

src of type DOMString

When the type attribute has the value "image", this attribute specifies the location of the image to be used to decorate the graphical submit button. See the src attribute definition in HTML 4.01.

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

type of type DOMString, modified in DOM Level 2

The type of control created (all lower case). See the type attribute definition in HTML 4.01. useMap of type DOMString

Use client-side image map. See the usemap attribute definition in HTML 4.01.

value of type DOMString

When the type attribute of the element has the value "text", "file" or "password", this represents the current contents of the corresponding form control, in an interactive user agent. Changing this attribute changes the contents of the form control, but does not change the value of the HTML value attribute of the element. When the type attribute of the element has the value "button", "hidden", "submit", "reset", "image", "checkbox" or "radio", this represents the HTML value attribute of the element. See the value attribute definition in HTML 4.01.

Methods

blur

Removes keyboard focus from this element.

No Parameters

No Return Value

No Exceptions

click

Simulate a mouse-click. For INPUT elements whose type attribute has one of the following values: "button", "checkbox", "radio", "reset", or "submit".

No Parameters

No Return Value

No Exceptions

focus

Gives keyboard focus to this element.

No Parameters

No Return Value

No Exceptions

select

Select the contents of the text area. For INPUT elements whose type attribute has one of the following values: "text", "file", or "password".

No Parameters

No Return Value

No Exceptions

Interface HTMLTextAreaElement

Multi-line text field. See the TEXTAREA element definition in HTML 4.01.

IDL Definition

```
interface HTMLTextAreaElement : HTMLElement {
    // Modified in DOM Level 2:
        attribute DOMString defaultValue;
    readonly attribute HTMLFormElement form;
        attribute DOMString accessKey;
        attribute long cols;
        attribute boolean disabled;
        attribute DOMString name;
        attribute boolean readOnly;
        attribute long rows;
        attribute long tabIndex;
    readonly attribute DOMString type;
        attribute DOMString value;
    void blur();
    void focus();
    void select();
};
```

Attributes

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

cols of type long

Width of control (in characters). See the cols attribute definition in HTML 4.01.

defaultValue of type DOMString, modified in DOM Level 2

Represents the contents of the element. The value of this attribute does not change if the contents of the corresponding form control, in an interactive user agent, changes.

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

name of type DOMString

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

```
readOnly of type boolean
```

This control is read-only. See the readonly attribute definition in HTML 4.01.

rows of type long

Number of text rows. See the rows attribute definition in HTML 4.01.

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

type of type DOMString, readonly

The type of this form control. This the string "textarea".

value of type DOMString

Represents the current contents of the corresponding form control, in an interactive user agent. Changing this attribute changes the contents of the form control, but does not change the contents of the element. If the entirety of the data can not fit into a single DOMString, the implementation may truncate the data.

Methods

blur

Removes keyboard focus from this element.

No Parameters

No Return Value

No Exceptions

focus

Gives keyboard focus to this element.

No Parameters

No Return Value

No Exceptions

select

Select the contents of the TEXTAREA.

No Parameters

No Return Value

No Exceptions

Interface *HTMLButtonElement*

Push button. See the BUTTON element definition in HTML 4.01.

IDL Definition

```
interface HTMLButtonElement : HTMLElement {
  readonly attribute HTMLFormElement form;
    attribute DOMString accessKey;
    attribute boolean disabled;
    attribute DOMString name;
    attribute long tabIndex;
  readonly attribute DOMString type;
    attribute DOMString value;
};
```

Attributes

```
accessKey of type DOMString
```

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

disabled of type boolean

The control is unavailable in this context. See the disabled attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

name of type DOMString

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

type of type DOMString, readonly

The type of button (all lower case). See the type attribute definition in HTML 4.01.

value of type DOMString

The current form control value. See the value attribute definition in HTML 4.01.

Interface HTMLLabelElement

Form field label text. See the LABEL element definition in HTML 4.01.

IDL Definition

```
interface HTMLLabelElement : HTMLElement {
    readonly attribute HTMLFormElement form;
        attribute DOMString accessKey;
        attribute DOMString htmlFor;
};
```

Attributes

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

htmlFor of type DOMString

This attribute links this label with another form control by id attribute. See the for attribute definition in HTML 4.01.

Interface HTMLFieldSetElement

Organizes form controls into logical groups. See the FIELDSET element definition in HTML 4.01.

IDL Definition

```
interface HTMLFieldSetElement : HTMLElement {
   readonly attribute HTMLFormElement form;
};
```

Attributes

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

Interface HTMLLegendElement

Provides a caption for a FIELDSET grouping. See the LEGEND element definition in HTML 4.01.

IDL Definition

```
interface HTMLLegendElement : HTMLElement {
  readonly attribute HTMLFormElement form;
      attribute DOMString accessKey;
      attribute DOMString align;
};
```

Attributes

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

align of type DOMString

Text alignment relative to FIELDSET. See the align attribute definition in HTML 4.01.

This attribute is deprecated in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

Interface HTMLUListElement

Unordered list. See the UL element definition in HTML 4.01.

IDL Definition

```
interface HTMLUListElement : HTMLElement {
          attribute boolean compact;
          attribute DOMString type;
};
```

Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

type of type DOMString

Bullet style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLOListElement

Ordered list. See the OL element definition in HTML 4.01.

IDL Definition

```
interface HTMLOListElement : HTMLElement {
    attribute boolean compact;
    attribute long start;
    attribute DOMString type;
};
```

Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01.

This attribute is deprecated in HTML 4.01.

start of type long

Starting sequence number. See the start attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

type of type DOMString

Numbering style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLDListElement

Definition list. See the DL element definition in HTML 4.01.

IDL Definition

Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

${\bf Interface}~ {\it HTMLDirectoryElement}$

Directory list. See the DIR element definition in HTML 4.01. This element is deprecated in HTML 4.01.

IDL Definition

Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLMenuElement

Menu list. See the MENU element definition in HTML 4.01. This element is deprecated in HTML 4.01.

IDL Definition

Attributes

compact of type boolean

Reduce spacing between list items. See the compact attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface *HTMLLIElement*

List item. See the LI element definition in HTML 4.01.

IDL Definition

```
interface HTMLLIElement : HTMLElement {
    attribute DOMString type;
    attribute long value;
};
```

Attributes

type of type DOMString

List item bullet style. See the type attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

value of type long

Reset sequence number when used in OL. See the value attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLDivElement

Generic block container. See the DIV element definition in HTML 4.01.

IDL Definition

```
interface HTMLDivElement : HTMLElement {
          attribute DOMString align;
};
```

Attributes

align of type DOMString

Horizontal text alignment. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLParagraphElement

Paragraphs. See the P element definition in HTML 4.01.

IDL Definition

Attributes

align of type DOMString

Horizontal text alignment. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLHeadingElement

For the H1 to H6 elements. See the H1 element definition in HTML 4.01.

IDL Definition

Attributes

align of type DOMString

Horizontal text alignment. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLQuoteElement

For the Q and BLOCKQUOTE elements. See the Q element definition in HTML 4.01.

IDL Definition

```
interface HTMLQuoteElement : HTMLElement {
          attribute DOMString cite;
};
```

Attributes

cite of type DOMString

A URI [IETF RFC 2396] designating a source document or message. See the cite attribute definition in HTML 4.01.

Interface *HTMLPreElement*

Preformatted text. See the PRE element definition in HTML 4.01.

```
interface HTMLPreElement : HTMLElement {
          attribute long width;
};
```

width of type long

Fixed width for content. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLBRElement

Force a line break. See the BR element definition in HTML 4.01.

IDL Definition

Attributes

clear of type DOMString

Control flow of text around floats. See the clear attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLBaseFontElement

Base font. See the BASEFONT element definition in HTML 4.01. This element is deprecated in HTML 4.01.

IDL Definition

```
interface HTMLBaseFontElement : HTMLElement {
    attribute DOMString color;
    attribute DOMString face;
    // Modified in DOM Level 2:
        attribute long size;
};
```

Attributes

color of type DOMString

Font color. See the color attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

face of type DOMString

Font face identifier. See the face attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type long, modified in **DOM Level 2**

Computed font size. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLFontElement

Local change to font. See the FONT element definition in HTML 4.01. This element is deprecated in HTML 4.01.

```
interface HTMLFontElement : HTMLElement {
    attribute DOMString color;
    attribute DOMString face;
    attribute DOMString size;
};
```

```
color of type DOMString
```

Font color. See the color attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

face of type DOMString

Font face identifier. See the face attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type DOMString

Font size. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface *HTMLHRElement*

Create a horizontal rule. See the HR element definition in HTML 4.01.

IDL Definition

```
interface HTMLHRElement : HTMLElement {
    attribute DOMString align;
    attribute boolean noShade;
    attribute DOMString size;
    attribute DOMString width;
};
```

Attributes

align of type DOMString

Align the rule on the page. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

noShade of type boolean

Indicates to the user agent that there should be no shading in the rendering of this element. See the noshade attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

size of type DOMString

The height of the rule. See the size attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

width of type DOMString

The width of the rule. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLModElement

Notice of modification to part of a document. See the INS and DEL element definitions in HTML 4.01.

IDL Definition

```
interface HTMLModElement : HTMLElement {
          attribute DOMString cite;
          attribute DOMString dateTime;
};
```

Attributes

cite of type DOMString

A URI [IETF RFC 2396] designating a document that describes the reason for the change. See the cite attribute definition in HTML 4.01.

dateTime of type DOMString

The date and time of the change. See the datetime attribute definition in HTML 4.01.

Interface HTMLAnchorElement

The anchor element. See the A element definition in HTML 4.01.

IDL Definition

```
interface HTMLAnchorElement : HTMLElement {
          attribute DOMString accessKey;
          attribute DOMString
                                 charset;
          attribute DOMString
                                coords;
          attribute DOMString
                                 href;
                               hreflang;
name;
          attribute DOMString
          attribute DOMString
          attribute DOMString
                                rel;
          attribute DOMString
                                rev;
                               shape;
          attribute DOMString
          attribute long
                                tabIndex;
                               target;
          attribute DOMString
          attribute DOMString
                                type;
                  blur();
 void
                  focus();
 biov
};
```

Attributes

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

charset of type DOMString

The character encoding of the linked resource. See the charset attribute definition in HTML 4.01.

coords of type DOMString

Comma-separated list of lengths, defining an active region geometry. See also shape for the shape of the region. See the coords attribute definition in HTML 4.01.

href of type DOMString

The absolute URI [IETF RFC 2396] of the linked resource. See the href attribute definition in HTML 4.01.

hreflang of type DOMString

Language code of the linked resource. See the hreflang attribute definition in HTML 4.01. name of type DOMString

Anchor name. See the name attribute definition in HTML 4.01.

rel of type DOMString

Forward link type. See the rel attribute definition in HTML 4.01.

rev of type DOMString

Reverse link type. See the rev attribute definition in HTML 4.01.

shape of type DOMString

The shape of the active area. The coordinates are given by coords. See the shape attribute definition in HTML 4.01.

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

target of type DOMString

Frame to render the resource in. See the target attribute definition in HTML 4.01.

type of type DOMString

Advisory content type. See the type attribute definition in HTML 4.01.

Methods

blur

Removes keyboard focus from this element.

No Parameters

No Return Value

No Exceptions

focus

Gives keyboard focus to this element.

No Parameters

No Return Value

No Exceptions

Interface HTMLImageElement

Embedded image. See the IMG element definition in HTML 4.01.

```
interface HTMLImageElement : HTMLElement {
          attribute DOMString

DOMString
          attribute DOMString name;
                                   align;
                                   alt;
          attribute DOMString
                                   border;
  // Modified in DOM Level 2:
          attribute long
                                   height;
  // Modified in DOM Level 2:
          attribute long
                                   hspace;
          attribute boolean
                                   isMap;
          attribute DOMString
                                   longDesc;
          attribute DOMString
                                   src;
          attribute DOMString
                                   useMap;
  // Modified in DOM Level 2:
```

```
attribute long vspace;
// Modified in DOM Level 2:
    attribute long width;
};
```

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

alt of type DOMString

Alternate text for user agents not rendering the normal content of this element. See the alt attribute definition in HTML 4.01.

border of type DOMString

Width of border around image. See the border attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was DOMString in DOM Level 1 HTML [DOM Level 1].

height of type long, modified in DOM Level 2

Height of the image in pixels. See the height attribute definition in HTML 4.01. Note that the type of this attribute was DOMString in DOM Level 1 HTML [DOM Level 1].

hspace of type long, modified in DOM Level 2

Horizontal space to the left and right of this image in pixels. See the hspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was DOMString in DOM Level 1 HTML [DOM Level 1].

isMap of type boolean

Use server-side image map. See the ismap attribute definition in HTML 4.01.

longDesc of type DOMString

URI [IETF RFC 2396] designating a long description of this image or frame. See the longdesc attribute definition in HTML 4.01.

name of type DOMString

The name of the element (for backwards compatibility).

src of type DOMString

URI [IETF RFC 2396] designating the source of this image. See the src attribute definition in HTML 4.01.

useMap of type DOMString

Use client-side image map. See the usemap attribute definition in HTML 4.01.

vspace of type long, modified in DOM Level 2

Vertical space above and below this image in pixels. See the vspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01. Note that the type of this attribute was "DOMString" in DOM Level 1 HTML [DOM Level 1].

width of type long, modified in DOM Level 2

The width of the image in pixels. See the width attribute definition in HTML 4.01. Note that the type of this attribute was DOMString in DOM Level 1 HTML [DOM Level 1].

Interface HTMLObjectElement

Generic embedded object.

Note: In principle, all properties on the object element are read-write but in some environments some properties may be read-only once the underlying object is instantiated. See the OBJECT element definition in [HTML 4.01].

IDL Definition

```
interface HTMLObjectElement : HTMLElement {
  readonly attribute HTMLFormElement form;
    attribute DOMString code;
  attribute DOMString align;
  attribute DOMString archive;
  attribute DOMString border;
  attribute DOMString codeBase;
  attribute DOMString data;
  attribute DOMString data;
  attribute DOMString height;
  attribute boolean declare;
  attribute long hspace;
  attribute DOMString name;
  attribute DOMString standby;
  attribute long tabIndex;
  attribute DOMString useMap;
  attribute DOMString width;
// Introduced in DOM Level 2:
  readonly attribute Document contentDocument;
};
```

Attributes

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

archive of type DOMString

Space-separated list of archives. See the archive attribute definition in HTML 4.01.

border of type DOMString

Width of border around the object. See the border attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

code of type DOMString

Applet class file. See the code attribute for HTMLAppletElement.

codeBase of type DOMString

Base URI [IETF RFC 2396] for classid, data, and archive attributes. See the codebase attribute definition in HTML 4.01.

codeType of type DOMString

Content type for data downloaded via classid attribute. See the codetype attribute definition in HTML 4.01.

contentDocument of type Document, readonly, introduced in DOM Level 2

The document this object contains, if there is any and it is available, or null otherwise. data of type DOMString

A URI [IETF RFC 2396] specifying the location of the object's data. See the data attribute definition in HTML 4.01.

declare of type boolean

Declare (for future reference), but do not instantiate, this object. See the declare attribute definition in HTML 4.01.

form of type HTMLFormElement [p.25], readonly

Returns the FORM element containing this control. Returns null if this control is not within the context of a form.

height of type DOMString

Override height. See the height attribute definition in HTML 4.01.

hspace of type long

Horizontal space, in pixels, to the left and right of this image, applet, or object. See the hspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

name of type DOMString

Form control or object name when submitted with a form. See the name attribute definition in HTML 4.01.

standby of type DOMString

Message to render while loading the object. See the standby attribute definition in HTML 4 01

tabIndex of type long

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

type of type DOMString

Content type for data downloaded via data attribute. See the type attribute definition in HTML 4.01.

useMap of type DOMString

Use client-side image map. See the usemap attribute definition in HTML 4.01.

vspace of type long

Vertical space, in pixels, above and below this image, applet, or object. See the vspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

width of type DOMString

Override width. See the width attribute definition in HTML 4.01.

Interface HTMLParamElement

Parameters fed to the OBJECT element. See the PARAM element definition in HTML 4.01.

IDL Definition

Attributes

name of type DOMString

The name of a run-time parameter. See the name attribute definition in HTML 4.01.

```
type of type DOMString
```

Content type for the value attribute when valuetype has the value "ref". See the type attribute definition in HTML 4.01.

```
value of type DOMString
```

The value of a run-time parameter. See the value attribute definition in HTML 4.01.

```
valueType of type DOMString
```

Information about the meaning of the value attribute value. See the valuetype attribute definition in HTML 4.01.

Interface HTMLAppletElement

An embedded Java applet. See the APPLET element definition in HTML 4.01. This element is deprecated in HTML 4.01.

IDL Definition

```
interface HTMLAppletElement : HTMLElement {
              attribute DOMString align;
             attribute DOMString alt;
attribute DOMString archive;
attribute DOMString code;
attribute DOMString codeBase
attribute DOMString height;
ied in DOM Level 2:
              attribute DOMString
                                              codeBase;
  // Modified in DOM Level 2:
              attribute long
                                               hspace;
              attribute DOMString
                                               name;
  // Modified in DOM Level 2:
              attribute DOMString
                                              object;
  // Modified in DOM Level 2:
                                               vspace;
             attribute long
             attribute DOMString vspace width;
};
```

Attributes

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
alt of type DOMString
```

Alternate text for user agents not rendering the normal content of this element. See the alt attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
archive of type DOMString
```

Comma-separated archive list. See the archive attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
code of type DOMString
```

Applet class file. See the code attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
codeBase of type DOMString
```

Optional base URI [IETF RFC 2396] for applet. See the codebase attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
height of type DOMString
```

Override height. See the height attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

hspace of type long, modified in DOM Level 2

Horizontal space, in pixels, to the left and right of this image, applet, or object. See the hspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
name of type DOMString
```

The name of the applet. See the name attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
object of type DOMString, modified in DOM Level 2
```

The value of the "object" attribute. See the object attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
vspace of type long, modified in DOM Level 2
```

Vertical space, in pixels, above and below this image, applet, or object. See the vspace attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

```
width of type DOMString
```

Override width. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface *HTMLMapElement*

Client-side image map. See the MAP element definition in HTML 4.01.

IDL Definition

Attributes

```
areas of type HTMLCollection [p.13], readonly The list of areas defined for the image map.
```

```
name of type DOMString
```

Names the map (for use with usemap). See the name attribute definition in HTML 4.01.

Interface HTMLAreaElement

Client-side image map area definition. See the AREA element definition in HTML 4.01.

```
interface HTMLAreaElement : HTMLElement {
          attribute DOMString accessKey;
          attribute DOMString
                                  alt;
          attribute DOMString
                                  coords;
          attribute DOMString
                                  href;
          attribute boolean
                                  noHref;
          attribute DOMString
                                  shape;
          attribute long
                                  tabIndex;
          attribute DOMString target;
};
```

accessKey of type DOMString

A single character access key to give access to the form control. See the accesskey attribute definition in HTML 4.01.

```
alt of type DOMString
```

Alternate text for user agents not rendering the normal content of this element. See the alt attribute definition in HTML 4.01.

```
coords of type DOMString
```

Comma-separated list of lengths, defining an active region geometry. See also shape for the shape of the region. See the coords attribute definition in HTML 4.01.

```
href of type DOMString
```

The URI [IETF RFC 2396] of the linked resource. See the href attribute definition in HTML 4.01.

```
noHref of type boolean
```

Specifies that this area is inactive, i.e., has no associated action. See the nohref attribute definition in HTML 4.01.

```
shape of type DOMString
```

The shape of the active area. The coordinates are given by coords. See the shape attribute definition in HTML 4.01.

```
tabIndex of type long
```

Index that represents the element's position in the tabbing order. See the tabindex attribute definition in HTML 4.01.

```
target of type DOMString
```

Frame to render the resource in. See the target attribute definition in HTML 4.01.

Interface HTMLScriptElement

Script statements. See the SCRIPT element definition in HTML 4.01.

IDL Definition

Attributes

```
charset of type DOMString
```

The character encoding of the linked resource. See the charset attribute definition in HTML 4.01.

```
defer of type boolean
```

Indicates that the user agent can defer processing of the script. See the defer attribute definition in HTML 4.01.

```
event of type DOMString

Reserved for future use.

htmlFor of type DOMString

Reserved for future use.

src of type DOMString

URI [IETF RFC 2396] designating an external script. See the src attribute definition in HTML 4.01.

text of type DOMString

The script content of the element.

type of type DOMString
```

The content type of the script language. See the type attribute definition in HTML 4.01.

Interface HTMLTableElement

The create* and delete* methods on the table allow authors to construct and modify tables. [HTML 4.01] specifies that only one of each of the CAPTION, THEAD, and TFOOT elements may exist in a table. Therefore, if one exists, and the createTHead() or createTFoot() method is called, the method returns the existing THead or TFoot element. See the TABLE element definition in HTML 4.01.

```
interface HTMLTableElement : HTMLElement {
  // Modified in DOM Level 2:
          attribute HTMLTableCaptionElement caption;
                                       // raises(DOMException) on setting
 // Modified in DOM Level 2:
          attribute HTMLTableSectionElement tHead;
                                       // raises(DOMException) on setting
  // Modified in DOM Level 2:
          attribute HTMLTableSectionElement tFoot;
                                      // raises(DOMException) on setting
 readonly attribute HTMLCollection rows;
 readonly attribute HTMLCollection tBodies;
          attribute DOMString align;
                                  bgColor;
          attribute DOMString
                                 bgcolor,
border;
cellPadding;
cellSpacing;
frame;
rules;
          attribute DOMString
          attribute DOMString
          attribute DOMString
          attribute DOMString
          attribute DOMString
          attribute DOMString summary; attribute DOMString width:
          attribute DOMString
                                   width;
 HTMLElement createTHead();
 void
                    deleteTHead();
 void
                    deleteCaption();
  // Modified in DOM Level 2:
 HTMLElement insertRow(in long index)
                                       raises(DOMException);
```

align of type DOMString

Specifies the table's position with respect to the rest of the document. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

bgColor of type DOMString

Cell background color. See the bgcolor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

border of type DOMString

The width of the border around the table. See the border attribute definition in HTML 4.01.

caption of type HTMLTableCaptionElement [p.53], modified in DOM Level 2

Returns the table's CAPTION, or void if none exists.

Exceptions on setting

DOMException HIERARCHY_REQUEST_ERR: if the element is not a CAPTION.

cellPadding of type DOMString

Specifies the horizontal and vertical space between cell content and cell borders. See the cellpadding attribute definition in HTML 4.01.

cellSpacing of type DOMString

Specifies the horizontal and vertical separation between cells. See the cellspacing attribute definition in HTML 4.01.

frame of type DOMString

Specifies which external table borders to render. See the frame attribute definition in HTML 4.01.

rows of type HTMLCollection [p.13], readonly

Returns a collection of all the rows in the table, including all in THEAD, TFOOT, all TBODY elements.

rules of type DOMString

Specifies which internal table borders to render. See the rules attribute definition in HTML 4.01.

summary of type DOMString

Description about the purpose or structure of a table. See the summary attribute definition in HTML 4.01.

tBodies of type HTMLCollection [p.13], readonly

Returns a collection of the table bodies (including implicit ones).

tFoot of type HTMLTableSectionElement [p.54], modified in **DOM Level 2** Returns the table's TFOOT, or null if none exists.

Exceptions on setting

DOMException HIERARCHY_REQUEST_ERR: if the element is not a TFOOT.

thead of type HTMLTableSectionElement [p.54], modified in **DOM Level 2**Returns the table's THEAD, or null if none exists.

Exceptions on setting

DOMException HIERARCHY_REQUEST_ERR: if the element is not a THEAD.

width of type DOMString

Specifies the desired table width. See the width attribute definition in HTML 4.01.

Methods

createCaption

Create a new table caption object or return an existing one.

Return Value

HTMLElement [p.20] A CAPTION element.

No Parameters

No Exceptions

createTFoot

Create a table footer row or return an existing one.

Return Value

HTMLElement [p.20] A footer element (TFOOT).

No Parameters

No Exceptions

createTHead

Create a table header row or return an existing one.

Return Value

HTMLElement [p.20] A new table header element (THEAD).

No Parameters

No Exceptions

deleteCaption

Delete the table caption, if one exists.

No Parameters

No Return Value

No Exceptions

deleteRow modified in DOM Level 2

Delete a table row.

Parameters

index of type long

The index of the row to be deleted. This index starts from 0 and is relative to the logical order (not document order) of all the rows contained inside the table. If the

index is -1 the last row in the table is deleted.

Exceptions

DOMException

INDEX_SIZE_ERR: Raised if the specified index is greater than or equal to the number of rows or if the index is a negative number other than -1.

No Return Value

deleteTFoot

Delete the footer from the table, if one exists.

No Parameters

No Return Value

No Exceptions

deleteTHead

Delete the header from the table, if one exists.

No Parameters

No Return Value

No Exceptions

insertRow modified in DOM Level 2

Insert a new empty row in the table. The new row is inserted immediately before and in the same section as the current indexth row in the table. If index is -1 or equal to the number of rows, the new row is appended. In addition, when the table is empty the row is inserted into a TBODY which is created and inserted into the table.

Note: A table row cannot be empty according to [HTML 4.01].

Parameters

index of type long

The row number where to insert a new row. This index starts from 0 and is relative to the logical order (not document order) of all the rows contained inside the table.

Return Value

HTMLElement [p.20] The newly created row.

Exceptions

DOMException

INDEX_SIZE_ERR: Raised if the specified index is greater than the number of rows or if the index is a negative number other than -1.

Interface HTMLTableCaptionElement

Table caption See the CAPTION element definition in HTML 4.01.

IDL Definition

Attributes

align of type DOMString

Caption alignment with respect to the table. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLTableColElement

Regroups the COL and COLGROUP elements. See the COL element definition in HTML 4.01.

IDL Definition

```
interface HTMLTableColElement : HTMLElement {
    attribute DOMString align;
    attribute DOMString ch;
    attribute DOMString chOff;
    attribute long span;
    attribute DOMString vAlign;
    attribute DOMString width;
};
```

Attributes

align of type DOMString

Horizontal alignment of cell data in column. See the align attribute definition in HTML 4.01.

ch of type DOMString

Alignment character for cells in a column. See the char attribute definition in HTML 4.01. chOff of type DOMString

Offset of alignment character. See the charoff attribute definition in HTML 4.01.

span of type long

Indicates the number of columns in a group or affected by a grouping. See the span attribute definition in HTML 4.01.

vAlign of type DOMString

Vertical alignment of cell data in column. See the valign attribute definition in HTML 4.01. width of type DOMString

Default column width. See the width attribute definition in HTML 4.01.

Interface HTMLTableSectionElement

The THEAD, TFOOT, and TBODY elements.

align of type DOMString

Horizontal alignment of data in cells. See the align attribute for HTMLTheadElement for details.

ch of type DOMString

Alignment character for cells in a column. See the char attribute definition in HTML 4.01. chOff of type DOMString

Offset of alignment character. See the charoff attribute definition in HTML 4.01.

rows of type HTMLCollection [p.13], readonly

The collection of rows in this table section.

vAlign of type DOMString

Vertical alignment of data in cells. See the valign attribute for HTMLTheadElement for details.

Methods

deleteRow modified in DOM Level 2

Delete a row from this section.

Parameters

index of type long

The index of the row to be deleted, or -1 to delete the last row. This index starts from 0 and is relative only to the rows contained inside this section, not all the rows in the table.

Exceptions

DOMException

INDEX_SIZE_ERR: Raised if the specified index is greater than or equal to the number of rows or if the index is a negative number other than -1.

No Return Value

insertRow modified in DOM Level 2

Insert a row into this section. The new row is inserted immediately before the current indexth row in this section. If index is -1 or equal to the number of rows in this section, the new row is appended.

Parameters

index of type long

The row number where to insert a new row. This index starts from 0 and is relative only to the rows contained inside this section, not all the rows in the table.

Return Value

HTMLElement [p.20] The newly created row.

Exceptions

DOMException INDEX_SIZE_ERR: Raised if the specified index is greater than the number of rows of if the index is a negative number other than -1.

Interface HTMLTableRowElement

A row in a table. See the TR element definition in HTML 4.01.

IDL Definition

```
interface HTMLTableRowElement : HTMLElement {
 // Modified in DOM Level 2:
                                  rowIndex;
 readonly attribute long
 // Modified in DOM Level 2:
 readonly attribute long
                                  sectionRowIndex;
 // Modified in DOM Level 2:
 readonly attribute HTMLCollection cells;
          attribute DOMString align;
                               bgColo
ch;
chOff;
          attribute DOMString
                                 bgColor;
          attribute DOMString
          attribute DOMString
          attribute DOMString
                                 vAlign;
 // Modified in DOM Level 2:
 HTMLElement
              insertCell(in long index)
                                     raises(DOMException);
 // Modified in DOM Level 2:
 void
           deleteCell(in long index)
                                     raises(DOMException);
};
```

Attributes

align of type DOMString

Horizontal alignment of data within cells of this row. See the align attribute definition in HTML 4.01.

bgColor of type DOMString

Background color for rows. See the bgcolor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

cells of type HTMLCollection [p.13], readonly, modified in **DOM Level 2**The collection of cells in this row.

ch of type DOMString

Alignment character for cells in a column. See the char attribute definition in HTML 4.01. chOff of type DOMString

Offset of alignment character. See the charoff attribute definition in HTML 4.01.

rowIndex of type long, readonly, modified in **DOM Level 2**

This is in logical order and not in document order. The rowIndex does take into account sections (THEAD, TFOOT, or TBODY) within the table, placing THEAD rows first in the

index, followed by TBODY rows, followed by TFOOT rows.

sectionRowIndex of type long, readonly, modified in DOM Level 2

The index of this row, relative to the current section (THEAD, TFOOT, or TBODY), starting from 0.

vAlign of type DOMString

Vertical alignment of data within cells of this row. See the valign attribute definition in HTML 4.01.

Methods

deleteCell modified in DOM Level 2

Delete a cell from the current row.

Parameters

index of type long

The index of the cell to delete, starting from 0. If the index is -1 the last cell in the row is deleted.

Exceptions

DOMException INDEX_SIZE_ERR: Raised if the specified index is greater

than or equal to the number of cells or if the index is a negative

number other than -1.

No Return Value

insertCell modified in DOM Level 2

Insert an empty TD cell into this row. If index is -1 or equal to the number of cells, the new cell is appended.

Parameters

index of type long

The place to insert the cell, starting from 0.

Return Value

HTMLElement [p.20] The newly created cell.

Exceptions

DOMException INDEX_SIZE_ERR: Raised if the specified index is greater

than the number of cells or if the index is a negative number other

than -1.

Interface HTMLTableCellElement

The object used to represent the TH and TD elements. See the TD element definition in HTML 4.01.

```
interface HTMLTableCellElement : HTMLElement {
  readonly attribute long
                                       cellIndex;
            attribute DOMString
                                          abbr;
            attribute DOMString
                                          align;
            attribute DOMString
                                          axis;
            attribute DOMString
                                          bgColor;
            attribute DOMString
                                          ch;
            attribute DOMString
                                          chOff;
            attribute long
                                          colSpan;
            attribute DOMString headers;
attribute DOMString height;
attribute boolean noWrap;
            attribute boolean
                                        noWrap;
            attribute long
                                         rowSpan;
            attribute long
attribute DOMString scope;
attribute DOMString vAlign;
width;
            attribute DOMString
                                          width;
};
```

abbr of type DOMString

Abbreviation for header cells. See the abbr attribute definition in HTML 4.01.

align of type DOMString

Horizontal alignment of data in cell. See the align attribute definition in HTML 4.01.

axis of type DOMString

Names group of related headers. See the axis attribute definition in HTML 4.01.

bgColor of type DOMString

Cell background color. See the bgcolor attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

cellIndex of type long, readonly

The index of this cell in the row, starting from 0. This index is in document tree order and not display order.

ch of type DOMString

Alignment character for cells in a column. See the char attribute definition in HTML 4.01. chOff of type DOMString

Offset of alignment character. See the charoff attribute definition in HTML 4.01.

colSpan of type long

Number of columns spanned by cell. See the colspan attribute definition in HTML 4.01.

headers of type DOMString

List of id attribute values for header cells. See the headers attribute definition in HTML 4.01.

height of type DOMString

Cell height. See the height attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

noWrap of type boolean

Suppress word wrapping. See the nowrap attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

rowSpan of type long

Number of rows spanned by cell. See the rowspan attribute definition in HTML 4.01.

```
scope of type DOMString
```

Scope covered by header cells. See the scope attribute definition in HTML 4.01.

```
vAlign of type DOMString
```

Vertical alignment of data in cell. See the valign attribute definition in HTML 4.01.

```
width of type DOMString
```

Cell width. See the width attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

Interface HTMLFrameSetElement

Create a grid of frames. See the FRAMESET element definition in HTML 4.01.

IDL Definition

```
interface HTMLFrameSetElement : HTMLElement {
    attribute DOMString cols;
    attribute DOMString rows;
};
```

Attributes

```
cols of type DOMString
```

The number of columns of frames in the frameset. See the cols attribute definition in HTML 4.01.

```
rows of type DOMString
```

The number of rows of frames in the frameset. See the rows attribute definition in HTML 4.01.

Interface HTMLFrameElement

Create a frame. See the FRAME element definition in HTML 4.01.

IDL Definition

```
interface HTMLFrameElement : HTMLElement {
    attribute DOMString frameBorder;
    attribute DOMString longDesc;
    attribute DOMString marginHeight;
    attribute DOMString marginWidth;
    attribute DOMString name;
    attribute boolean noResize;
    attribute DOMString scrolling;
    attribute DOMString src;

// Introduced in DOM Level 2:
    readonly attribute Document contentDocument;
};
```

Attributes

contentDocument of type Document, readonly, introduced in DOM Level 2

The document this frame contains, if there is any and it is available, or null otherwise. frameBorder of type DOMString

Request frame borders. See the frameborder attribute definition in HTML 4.01.

longDesc of type DOMString

URI [IETF RFC 2396] designating a long description of this image or frame. See the longdesc attribute definition in HTML 4.01.

```
marginHeight of type DOMString
```

Frame margin height, in pixels. See the marginheight attribute definition in HTML 4.01. marginWidth of type DOMString

Frame margin width, in pixels. See the marginwidth attribute definition in HTML 4.01. name of type DOMString

The frame name (object of the target attribute). See the name attribute definition in HTML 4.01.

noResize of type boolean

When true, forbid user from resizing frame. See the noresize attribute definition in HTML 4.01.

scrolling of type DOMString

Specify whether or not the frame should have scrollbars. See the scrolling attribute definition in HTML 4.01.

src of type DOMString

A URI [IETF RFC 2396] designating the initial frame contents. See the src attribute definition in HTML 4.01.

Interface HTMLIFrameElement

Inline subwindows. See the IFRAME element definition in HTML 4.01.

IDL Definition

```
interface HTMLIFrameElement : HTMLElement {
          attribute DOMString align;
          attribute DOMString
                                  frameBorder;
          attribute DOMString
                                 height;
          attribute DOMString
                                 longDesc;
          attribute DOMString
                                 marginHeight;
          attribute DOMString
                                 marginWidth;
          attribute DOMString
                                 name;
          attribute DOMString
                                 scrolling;
          attribute DOMString
                                 src;
          attribute DOMString
                                 width;
 // Introduced in DOM Level 2:
 readonly attribute Document
                                 contentDocument;
};
```

Attributes

align of type DOMString

Aligns this object (vertically or horizontally) with respect to its surrounding text. See the align attribute definition in HTML 4.01. This attribute is deprecated in HTML 4.01.

contentDocument of type Document, readonly, introduced in DOM Level 2

The document this frame contains, if there is any and it is available, or null otherwise. frameBorder of type DOMString

Request frame borders. See the frameborder attribute definition in HTML 4.01.

height of type DOMString

Frame height. See the height attribute definition in HTML 4.01.

longDesc of type DOMString

URI [IETF RFC 2396] designating a long description of this image or frame. See the longdesc attribute definition in HTML 4.01.

marginHeight of type DOMString

Frame margin height, in pixels. See the marginheight attribute definition in HTML 4.01. marginWidth of type DOMString

Frame margin width, in pixels. See the marginwidth attribute definition in HTML 4.01. name of type DOMString

The frame name (object of the target attribute). See the name attribute definition in HTML 4.01.

scrolling of type DOMString

Specify whether or not the frame should have scrollbars. See the scrolling attribute definition in HTML 4.01.

src of type DOMString

A URI [IETF RFC 2396] designating the initial frame contents. See the src attribute definition in HTML 4.01.

width of type DOMString

Frame width. See the width attribute definition in HTML 4.01.

Appendix A: Changes

Editor:

Philippe Le Hégaret, W3C

A.1: Changes between DOM Level 1 and DOM Level 2

Note: The DOM Level 2 HTML module is not backward compatible with the DOM Level 1 HTML module.

OMG IDL

The DOM Level 2 specifications use CORBA 2.3.1 instead of CORBA 2.2.

XHTML 1.0 support

The DOM Level 2 HTML module supports HTML 4 as well as XHTML 1.0 documents. Therefore, case sensitivity in methods depends on Document support for the feature "XML" as well as "HTML".

A.1.1: Changes to DOM Level 1 interfaces and exceptions

Interface HTMLDocument [p.15]

the method getElementById is now inherited from the Document interface [DOM Level 2 Core] where it was moved.

Interface HTMLSelectElement [p.26]

The type of the attribute options was changed from $\mathtt{HTMLCollection}\ [p.13]$ to $\mathtt{HTMLOptionsCollection}\ [p.14]$.

The attribute length is no longer readonly and is now unsigned.

Interface HTMLOptionElement [p.29]

Changing the defaultSelected attribute does not reset the state of the form control. index is readonly.

Interface HTMLInputElement [p.30]

the attribute type is no longer read only.

The type of the attribute size was changed from DOMString to unsigned long.

Interface HTMLTextAreaElement [p.33]

Changing the defaultValue attribute does not reset the contents of the form control.

Interface HTMLBlockquoteElement

this interface has been removed. BLOCKQUOTE elements are now supported by the HTMLQuoteElement [p.39] interface.

Interface HTMLBaseFontElement [p.40]

The attribute size is of type long.

Interface HTMLImageElement [p.43]

The lowSrc attribute was removed.

The types of the attributes height, hspace, width and vspace were changed from DOMString to long.

Interface HTMLObjectElement [p.44]

The attribute contentDocument was added.

Interface HTMLAppletElement [p.47]

The types of the attributes hapace and vapace were changed from DOMString to long.

The attribute object returns the value of the HTML object attribute.

Interface HTMLTableElement [p.50]

caption, tHead, tFoot, insertRow, and deleteRow may raise exceptions.

index uses a logical order, and not a document order.

Interface HTMLTableSectionElement [p.54]

The methods insertRow and deleteRow may raise exceptions.

Interface HTMLTableRowElement [p.56]

The attributes rowIndex, sectionRowIndex, and cells are readonly.

The methods insertCell and deleteCell may raise exceptions.

rowIndex uses a logical order, and not a document order.

Interface HTMLFrameElement [p.59]

the attribute contentDocument was added.

Interface HTMLIFrameElement [p.60]

the attribute contentDocument was added.

Module and package name

The module name used in the OMG IDL is now html 2.

The package name used in the Java bindings is now org.w3c.dom.html2.

A.1.2: New Interfaces

Interface HTMLOptionsCollection [p.14]

The HTMLOptionsCollection [p.14] interface was added to the HTML module.

Appendix B: IDL Definitions

This appendix contains the complete OMG IDL [OMG IDL] for the Level 2 Document Object Model HTML definitions.

Unfortunately the OMG IDL in this appendix is not conformant due to problems in the validator that was used to validate Level 1. The readOnly attribute on the HTMLInputElement [p.30] and HTMLTextAreaElement [p.33] interfaces, as well as the object attribute on the HTMLAppletElement [p.47] interface, are not conformant with OMG IDL 2.2. The valueType attribute on the HTMLParamElement [p.46] interface is not conformant with OMG IDL 2.3.1, which hadn't been released when DOM Level 1 [DOM Level 1] was published.

The IDL files are also available as: http://www.w3.org/TR/2003/REC-DOM-Level-2-HTML-20030109/idl.zip

html2.idl:

```
// File: html2.idl
#ifndef _HTML2_IDL_
#define _HTML2_IDL_

Appendix C: Java language Binding

This appendix contains the complete Java language [Java] binding for the Level 2 Document Object Model HTML.

The Java files are also available as http://www.w3.org/TR/2003/REC-DOM-Level-2-HTML-20030109/java-binding.zip

org/w3c/dom/html2/HTMLCollection.java:

```
package org.w3c.dom.html2;
import org.w3c.dom.Node;
public interface HTMLCollection {
    public int getLength();
    public Node item(int index);
    public Node namedItem(String name);
}
```

org/w3c/dom/html2/HTMLOptionsCollection.java:

org/w3c/dom/html2/HTMLDocument.java:

```
package org.w3c.dom.html2;
import org.w3c.dom.Document;
import org.w3c.dom.NodeList;
import org.w3c.dom.DOMException;
public interface HTMLDocument extends Document {
   public String getTitle();
   public void setTitle(String title);
```

```
public String getReferrer();
   public String getDomain();
   public String getURL();

Appendix D: ECMAScript Language Binding

This appendix contains the complete ECMAScript [ECMAScript] binding for the Level 2 Document Object Model HTML definitions.

Note: Exceptions handling is only supported by ECMAScript implementation conformant with the Standard ECMA-262 3rd. Edition ([ECMAScript]).

Objects that implement the **HTMLCollection** interface:

Properties of objects that implement the **HTMLCollection** interface:

length

This read-only property is a **Number**.

Functions of objects that implement the **HTMLCollection** interface:

item(index)

This function returns an object that implements the **Node** interface.

The **index** parameter is a **Number**.

Note: This object can also be dereferenced using square bracket notation (e.g. obj[1]).

Dereferencing with an integer **index** is equivalent to invoking the **item** function with that index.

namedItem(name)

This function returns an object that implements the **Node** interface.

The **name** parameter is a **String**.

Note: This object can also be dereferenced using square bracket notation (e.g. obj["foo"]).

Dereferencing using a string index is equivalent to invoking the **namedItem** function with that index.

Objects that implement the **HTMLOptionsCollection** interface:

Properties of objects that implement the **HTMLOptionsCollection** interface:

length

This property is a **Number** and can raise an object that implements **DOMException** interface on setting.

Functions of objects that implement the **HTMLOptionsCollection** interface:

item(index)

This function returns an object that implements the **Node** interface.

The **index** parameter is a **Number**.

Note: This object can also be dereferenced using square bracket notation (e.g. obj[1]).

Dereferencing with an integer **index** is equivalent to invoking the **item** function with that index.

namedItem(name)

This function returns an object that implements the **Node** interface.

The **name** parameter is a **String**.

Note: This object can also be dereferenced using square bracket notation (e.g. obj["foo"]).

Dereferencing using a string index is equivalent to invoking the **namedItem** function with that index.

Objects that implement the **HTMLDocument** interface:

Objects that implement the **HTMLDocument** interface have all properties and functions of the **Document** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDocument** interface:

title

This property is a **String**.

referrer

This read-only property is a **String**.

domain

This read-only property is a **String**.

URL

This read-only property is a **String**.

body

This property is an object that implements the **HTMLElement** interface.

images

This read-only property is an object that implements the **HTMLCollection** interface.

applets

This read-only property is an object that implements the **HTMLCollection** interface.

links

This read-only property is an object that implements the **HTMLCollection** interface.

forms

This read-only property is an object that implements the **HTMLCollection** interface.

anchors

This read-only property is an object that implements the **HTMLCollection** interface.

cookie

This property is a **String** and can raise an object that implements **DOMException** interface on setting.

Functions of objects that implement the **HTMLDocument** interface:

open()

This function has no return value.

close()

This function has no return value.

write(text)

This function has no return value.

The **text** parameter is a **String**.

writeln(text)

This function has no return value.

The **text** parameter is a **String**.

getElementsByName(elementName)

This function returns an object that implements the **NodeList** interface.

The **elementName** parameter is a **String**.

Objects that implement the **HTMLElement** interface:

Objects that implement the **HTMLElement** interface have all properties and functions of the **Element** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLElement** interface:

id

This property is a **String**.

```
title
```

This property is a **String**.

lang

This property is a **String**.

dir

This property is a **String**.

className

This property is a **String**.

Objects that implement the **HTMLHtmlElement** interface:

Objects that implement the **HTMLHtmlElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHtmlElement** interface:

version

This property is a **String**.

Objects that implement the **HTMLHeadElement** interface:

Objects that implement the **HTMLHeadElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHeadElement** interface:

profile

This property is a **String**.

Objects that implement the **HTMLLinkElement** interface:

Objects that implement the **HTMLLinkElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLinkElement** interface:

disabled

This property is a **Boolean**.

charset

This property is a **String**.

href

This property is a **String**.

hreflang

This property is a **String**.

media

This property is a **String**.

rel

This property is a **String**.

rev

This property is a **String**.

target

This property is a **String**.

type

This property is a **String**.

Objects that implement the **HTMLTitleElement** interface:

Objects that implement the **HTMLTitleElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTitleElement** interface:

text

This property is a **String**.

Objects that implement the **HTMLMetaElement** interface:

Objects that implement the **HTMLMetaElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMetaElement** interface:

content

This property is a **String**.

httpEquiv

This property is a **String**.

name

This property is a **String**.

scheme

This property is a **String**.

Objects that implement the **HTMLBaseElement** interface:

Objects that implement the **HTMLBaseElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBaseElement** interface:

href

This property is a **String**.

target

This property is a **String**.

Objects that implement the **HTMLIsIndexElement** interface:

Objects that implement the **HTMLIsIndexElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLIsIndexElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

prompt

This property is a **String**.

Objects that implement the **HTMLStyleElement** interface:

Objects that implement the **HTMLStyleElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLStyleElement** interface:

disabled

This property is a **Boolean**.

media

This property is a String.

type

This property is a **String**.

Objects that implement the **HTMLBodyElement** interface:

Objects that implement the **HTMLBodyElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBodyElement** interface:

```
aLink
              This property is a String.
         background
              This property is a String.
         bgColor
              This property is a String.
         link
              This property is a String.
         text
              This property is a String.
         vLink
              This property is a String.
Objects that implement the HTMLFormElement interface:
    Objects that implement the HTMLFormElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLFormElement interface:
         elements
              This read-only property is an object that implements the HTMLCollection interface.
         length
              This read-only property is a Number.
         name
              This property is a String.
         acceptCharset
              This property is a String.
         action
              This property is a String.
         enctype
              This property is a String.
         method
              This property is a String.
         target
              This property is a String.
    Functions of objects that implement the HTMLFormElement interface:
         submit()
              This function has no return value.
         reset()
              This function has no return value.
Objects that implement the HTMLSelectElement interface:
    Objects that implement the HTMLSelectElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLSelectElement interface:
         type
              This read-only property is a String.
```

selectedIndex

This property is a Number.

value

This property is a **String**.

length

This property is a **Number** and can raise an object that implements **DOMException** interface on setting.

form

This read-only property is an object that implements the **HTMLFormElement** interface.

options

This read-only property is an object that implements the **HTMLOptionsCollection** interface.

disabled

This property is a **Boolean**.

multiple

This property is a **Boolean**.

name

This property is a **String**.

size

This property is a Number.

tabIndex

This property is a **Number**.

Functions of objects that implement the **HTMLSelectElement** interface:

add(element, before)

This function has no return value.

The **element** parameter is an object that implements the **HTMLElement** interface.

The **before** parameter is an object that implements the **HTMLElement** interface.

This function can raise an object that implements the **DOMException** interface.

remove(index)

This function has no return value.

The **index** parameter is a **Number**.

blur()

This function has no return value.

focus()

This function has no return value.

Objects that implement the **HTMLOptGroupElement** interface:

Objects that implement the **HTMLOptGroupElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLOptGroupElement** interface:

disabled

This property is a **Boolean**.

label

This property is a **String**.

Objects that implement the **HTMLOptionElement** interface:

Objects that implement the **HTMLOptionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLOptionElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

defaultSelected

This property is a **Boolean**.

text

This read-only property is a **String**.

index

This read-only property is a Number.

disabled

This property is a **Boolean**.

label

This property is a **String**.

selected

This property is a **Boolean**.

value

This property is a **String**.

Objects that implement the **HTMLInputElement** interface:

Objects that implement the **HTMLInputElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLInputElement** interface:

defaultValue

This property is a **String**.

defaultChecked

This property is a **Boolean**.

form

This read-only property is an object that implements the **HTMLFormElement** interface.

accept

This property is a **String**.

accessKey

This property is a **String**.

align

This property is a **String**.

alt

This property is a **String**.

checked

This property is a **Boolean**.

disabled

This property is a **Boolean**.

maxLength

This property is a **Number**.

name

This property is a **String**.

readOnly

This property is a **Boolean**.

size

This property is a **Number**.

```
src
              This property is a String.
         tabIndex
              This property is a Number.
         type
              This property is a String.
         useMap
              This property is a String.
         value
              This property is a String.
    Functions of objects that implement the HTMLInputElement interface:
         blur()
              This function has no return value.
         focus()
              This function has no return value.
         select()
              This function has no return value.
         click()
              This function has no return value.
Objects that implement the HTMLTextAreaElement interface:
    Objects that implement the HTMLTextAreaElement interface have all properties and functions of
    the HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLTextAreaElement interface:
         defaultValue
              This property is a String.
         form
              This read-only property is an object that implements the HTMLFormElement interface.
         accessKev
              This property is a String.
         cols
              This property is a Number.
         disabled
              This property is a Boolean.
         name
              This property is a String.
         readOnly
              This property is a Boolean.
         rows
              This property is a Number.
         tabIndex
              This property is a Number.
         type
              This read-only property is a String.
         value
              This property is a String.
```

Functions of objects that implement the **HTMLTextAreaElement** interface:

blur()

This function has no return value.

focus()

This function has no return value.

select()

This function has no return value.

Objects that implement the **HTMLButtonElement** interface:

Objects that implement the **HTMLButtonElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLButtonElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

accessKey

This property is a **String**.

disabled

This property is a **Boolean**.

name

This property is a **String**.

tabIndex

This property is a **Number**.

type

This read-only property is a **String**.

value

This property is a **String**.

Objects that implement the **HTMLLabelElement** interface:

Objects that implement the **HTMLLabelElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLabelElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

accessKey

This property is a **String**.

htmlFor

This property is a **String**.

Objects that implement the **HTMLFieldSetElement** interface:

Objects that implement the **HTMLFieldSetElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFieldSetElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

Objects that implement the **HTMLLegendElement** interface:

Objects that implement the **HTMLLegendElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLegendElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

accessKey

This property is a **String**.

align

This property is a **String**.

Objects that implement the **HTMLUListElement** interface:

Objects that implement the **HTMLUListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLUListElement** interface:

compact

This property is a **Boolean**.

type

This property is a **String**.

Objects that implement the **HTMLOListElement** interface:

Objects that implement the **HTMLOListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLOListElement** interface:

compact

This property is a **Boolean**.

start

This property is a **Number**.

type

This property is a **String**.

Objects that implement the **HTMLDListElement** interface:

Objects that implement the **HTMLDListElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDListElement** interface:

compact

This property is a Boolean.

Objects that implement the **HTMLDirectoryElement** interface:

Objects that implement the **HTMLDirectoryElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDirectoryElement** interface:

compact

This property is a **Boolean**.

Objects that implement the **HTMLMenuElement** interface:

Objects that implement the **HTMLMenuElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMenuElement** interface:

compact

This property is a **Boolean**.

Objects that implement the **HTMLLIElement** interface:

Objects that implement the **HTMLLIElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLLIElement** interface:

type

This property is a **String**.

value

This property is a Number.

Objects that implement the **HTMLDivElement** interface:

Objects that implement the **HTMLDivElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLDivElement** interface:

align

This property is a **String**.

Objects that implement the **HTMLParagraphElement** interface:

Objects that implement the **HTMLParagraphElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLParagraphElement** interface:

align

This property is a **String**.

Objects that implement the **HTMLHeadingElement** interface:

Objects that implement the **HTMLHeadingElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLHeadingElement** interface:

align

This property is a **String**.

Objects that implement the **HTMLQuoteElement** interface:

Objects that implement the **HTMLQuoteElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLQuoteElement** interface:

cite

This property is a **String**.

Objects that implement the **HTMLPreElement** interface:

Objects that implement the **HTMLPreElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLPreElement** interface:

width

This property is a Number.

Objects that implement the **HTMLBRElement** interface:

Objects that implement the **HTMLBRElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBRElement** interface:

clear

This property is a **String**.

Objects that implement the **HTMLBaseFontElement** interface:

Objects that implement the **HTMLBaseFontElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLBaseFontElement** interface:

```
color
              This property is a String.
         face
              This property is a String.
         size
              This property is a Number.
Objects that implement the HTMLFontElement interface:
    Objects that implement the HTMLFontElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLFontElement interface:
         color
              This property is a String.
         face
              This property is a String.
         size
              This property is a String.
Objects that implement the HTMLHRElement interface:
    Objects that implement the HTMLHRElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLHRElement interface:
         align
              This property is a String.
         noShade
              This property is a Boolean.
         size
              This property is a String.
         width
              This property is a String.
Objects that implement the HTMLModElement interface:
    Objects that implement the HTMLModElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLModElement interface:
         cite
              This property is a String.
         dateTime
              This property is a String.
Objects that implement the HTMLAnchorElement interface:
    Objects that implement the HTMLAnchorElement interface have all properties and functions of the
    HTMLElement interface as well as the properties and functions defined below.
    Properties of objects that implement the HTMLAnchorElement interface:
         accessKev
              This property is a String.
         charset
```

This property is a **String**.

This property is a **String**.

coords

```
href
              This property is a String.
         hreflang
              This property is a String.

              This property is a String.
         src
              This property is a String.
```

useMap

This property is a **String**.

vspace

This property is a **Number**.

width

This property is a **Number**.

Objects that implement the **HTMLObjectElement** interface:

Objects that implement the **HTMLObjectElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLObjectElement** interface:

form

This read-only property is an object that implements the **HTMLFormElement** interface.

code

This property is a **String**.

align

This property is a **String**.

archive

This property is a **String**.

border

This property is a **String**.

codeBase

This property is a **String**.

codeType

This property is a **String**.

data

This property is a **String**.

declare

This property is a **Boolean**.

height

This property is a **String**.

hspace

This property is a **Number**.

name

This property is a **String**.

standby

This property is a **String**.

tabIndex

This property is a **Number**.

type

This property is a **String**.

useMap

This property is a **String**.

vspace

This property is a **Number**.

width

This property is a **String**.

contentDocument

This read-only property is an object that implements the **Document** interface.

Objects that implement the **HTMLParamElement** interface:

Objects that implement the **HTMLParamElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLParamElement** interface:

```
name
This property is a String.

type
This property is a String.

value
This property is a String.

valueType
```

This property is a **String**. Objects that implement the **HTMLAppletElement** interface:

Objects that implement the **HTMLAppletElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the HTMLAppletElement interface:

```
align
     This property is a String.
alt
     This property is a String.
archive

Objects that implement the **HTMLMapElement** interface:

Objects that implement the **HTMLMapElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLMapElement** interface:

areas

This read-only property is an object that implements the **HTMLCollection** interface.

name

This property is a **String**.

Objects that implement the **HTMLAreaElement** interface:

Objects that implement the **HTMLAreaElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLAreaElement** interface:

```
accessKey
This property is a String.
alt
This property is a String.
coords
This property is a String.
href
This property is a String.
noHref
This property is a Boolean.
shape
This property is a String.
tabIndex
This property is a Number.
target
```

This property is a **String**. Objects that implement the **HTMLScriptElement** interface:

Objects that implement the **HTMLScriptElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLScriptElement** interface:

```
text
```

This property is a **String**.

htmlFor

This property is a **String**.

event

This property is a **String**.

charset

This property is a **String**.

defer

This property is a **Boolean**.

src

This property is a **String**.

type

This property is a **String**.

Objects that implement the **HTMLTableElement** interface:

Objects that implement the **HTMLTableElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableElement** interface:

caption

This property is an object that implements the HTMLTableCaptionElement interface and

can raise an object that implements **DOMException** interface on setting.

tHead

This property is an object that implements the **HTMLTableSectionElement** interface and can raise an object that implements **DOMException** interface on setting.

tFoot

This property is an object that implements the **HTMLTableSectionElement** interface and can raise an object that implements **DOMException** interface on setting.

rows

This read-only property is an object that implements the **HTMLCollection** interface.

tBodies

This read-only property is an object that implements the **HTMLCollection** interface.

align

This property is a **String**.

bgColor

This property is a **String**.

border

This property is a **String**.

cellPadding

This property is a **String**.

cellSpacing

This property is a **String**.

frame

This property is a **String**.

rules

This property is a **String**.

summary

This property is a **String**.

width

This property is a **String**.

Functions of objects that implement the **HTMLTableElement** interface:

createTHead()

This function returns an object that implements the **HTMLElement** interface.

deleteTHead()

This function has no return value.

createTFoot()

This function returns an object that implements the **HTMLElement** interface.

deleteTFoot()

This function has no return value.

createCaption()

This function returns an object that implements the **HTMLElement** interface.

deleteCaption()

This function has no return value.

insertRow(index)

This function returns an object that implements the **HTMLElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

deleteRow(index)

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableCaptionElement** interface:

Objects that implement the **HTMLTableCaptionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the HTMLTableCaptionElement interface:

align

This property is a **String**.

Objects that implement the HTMLTableColElement interface:

Objects that implement the **HTMLTableColElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableColElement** interface:

align

This property is a **String**.

ch

This property is a **String**.

chOff

This property is a String.

span

This property is a Number.

vAlign

This property is a **String**.

width

This property is a **String**.

Objects that implement the **HTMLTableSectionElement** interface:

Objects that implement the **HTMLTableSectionElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableSectionElement** interface:

align

This property is a **String**.

ch

This property is a **String**.

chOff

This property is a **String**.

vAlign

This property is a **String**.

rows

This read-only property is an object that implements the **HTMLCollection** interface.

Functions of objects that implement the **HTMLTableSectionElement** interface:

insertRow(index)

This function returns an object that implements the **HTMLElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

deleteRow(index)

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableRowElement** interface:

Objects that implement the **HTMLTableRowElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableRowElement** interface:

rowIndex

This read-only property is a Number.

sectionRowIndex

This read-only property is a Number.

cells

This read-only property is an object that implements the **HTMLCollection** interface.

align

This property is a **String**.

bgColor

This property is a **String**.

ch

This property is a **String**.

chOff

This property is a **String**.

vAlign

This property is a **String**.

Functions of objects that implement the **HTMLTableRowElement** interface:

insertCell(index)

This function returns an object that implements the **HTMLElement** interface.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

deleteCell(index)

This function has no return value.

The **index** parameter is a **Number**.

This function can raise an object that implements the **DOMException** interface.

Objects that implement the **HTMLTableCellElement** interface:

Objects that implement the **HTMLTableCellElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLTableCellElement** interface:

cellIndex

This read-only property is a **Number**.

abbr

This property is a **String**.

align

This property is a **String**.

axis

This property is a **String**.

```
bgColor
     This property is a String.
ch
     This property is a String.
chOff
     This property is a String.
colSpan
     This property is a Number.
headers
     This property is a String.
height
     This property is a String.
noWrap
     This property is a Boolean.
rowSpan
     This property is a Number.
scope
     This property is a String.
vAlign
     This property is a String.
width
     This property is a String.
```

Objects that implement the **HTMLFrameSetElement** interface:

Objects that implement the **HTMLFrameSetElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFrameSetElement** interface:

cols

This property is a **String**.

rows

This property is a **String**.

Objects that implement the **HTMLFrameElement** interface:

Objects that implement the **HTMLFrameElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLFrameElement** interface:

frameBorder

This property is a **String**.

longDesc

This property is a **String**.

marginHeight

This property is a **String**.

marginWidth

This property is a **String**.

name

This property is a **String**.

noResize

This property is a **Boolean**.

scrolling

This property is a **String**.

src

This property is a **String**.

contentDocument

This read-only property is an object that implements the **Document** interface.

Objects that implement the **HTMLIFrameElement** interface:

Objects that implement the **HTMLIFrameElement** interface have all properties and functions of the **HTMLElement** interface as well as the properties and functions defined below.

Properties of objects that implement the **HTMLIFrameElement** interface:

align

This property is a **String**.

frameBorder

This property is a **String**.

height

This property is a **String**.

longDesc

This property is a **String**.

marginHeight

This property is a **String**.

marginWidth

This property is a **String**.

name

This property is a **String**.

scrolling

This property is a **String**.

src

This property is a **String**.

width

This property is a **String**.

contentDocument

This read-only property is an object that implements the **Document** interface.

HTMLAnchorElement objects in String expressions are evaluated as HTMLAnchorElement.href [p.42]. For example:

```
alert(" The absolute URI is " + myAnchorElement);
is equivalent to
    alert(" The absolute URI is " + myAnchorElement.href);
```

Appendix D: ECMAScript Language Binding

Appendix E: Acknowledgements

Many people contributed to this specification, including members of the DOM Working Group and the DOM Interest Group. We especially thank the following:

Andy Heninger (IBM), Arnaud Le Hors (W3C and IBM), Bill Smith (Sun), Bill Shea (Merrill Lynch), Chris Lovett (Microsoft), Chris Wilson (Microsoft), David Brownell (Sun), Glenn Adams (ATSC), James Davidson (Sun), Joe Kesselman (IBM), Joe Lapp (webMethods), Joe Marini (Macromedia), Johnny Stenback (Netscape), Jonathan Marsh (Microsoft), Jonathan Robie (Texcel Research and Software AG), Kim Adamson-Sharpe (SoftQuad Software Inc.), Lauren Wood (SoftQuad Software Inc., *former Chair*), Laurence Cable (Sun), Mark Davis (IBM), Mark Scardina (Oracle), Martin Dürst (W3C), Mick Goulish (Software AG), Mike Champion (Arbortext and Software AG), Miles Sabin (Cromwell Media), Patti Lutsky (Arbortext), Paul Grosso (Arbortext), Peter Sharpe (SoftQuad Software Inc.), Phil Karlton (Netscape), Philippe Le Hégaret (W3C, *W3C team contact and former Chair*), Ramesh Lekshmynarayanan (Merrill Lynch), Ray Whitmer (iMall, Excite@Home, Netscape and *Chair*), Rich Rollman (Microsoft), Rick Gessner (Netscape), Tom Pixley (Netscape), Vidur Apparao (Netscape), Vinod Anupam (Lucent).

Thanks to all those who have helped to improve this specification by sending suggestions and corrections.

The W3C tried to produce the most useful and accurate specification as possible but we wouldn't have been able to do so without the help of the DOM Test Suite effort. Special thanks to Curt Arnold, Rick Rivello (NIST), Robert Clary (Netscape) and Dimitris Dimitriadis for the DOM Level 2 HTML Test Suite. The DOM Test Suite is based on the test suite developed by Mary Brady (NIST).

E.1: Production Systems

This specification was written in XML. The HTML, OMG IDL, Java and ECMAScript bindings were all produced automatically.

This document was generated using DOM Level 2. We used Xerces as the basis DOM implementation and wish to thank the authors. Philippe Le Hégaret and Arnaud Le Hors wrote the Java programs which are the DOM application.

E.2: DOM Level 1

The authors of the DOM Level 1 specification, members of the DOM Working Group, deserve much credit for their hard work:

Lauren Wood (SoftQuad, Inc., *chair*), Arnaud Le Hors (W3C, *W3C staff contact*), Andrew Watson (Object Management Group), Bill Smith (Sun), Chris Lovett (Microsoft), Chris Wilson (Microsoft), David Brownell (Sun), David Singer (IBM), Don Park (invited), Eric Vasilik (Microsoft), Gavin Nicol (INSO), Ian Jacobs (W3C), James Clark (invited), Jared Sorensen (Novell), Jonathan Robie (Texcel Research and Software AG), Mike Champion (ArborText and Software AG), Paul Grosso (ArborText), Peter Sharpe (SoftQuad, Inc.), Phil Karlton (Netscape), Ray Whitmer (iMall), Rich Rollman (Microsoft), Rick Gessner (Netscape), Robert Sutor (IBM), Scott Isaacs (Microsoft), Sharon Adler (INSO), Steve Byrne (JavaSoft),

Tim Bray (invited), Tom Pixley (Netscape), Vidur Apparao (Netscape).

Thanks to Joe English, author of cost for helping so much in allowing us to develop a framework that made the production of this specification possible.

Thanks to Jan Kärrman, author of html2ps for helping so much in creating the Postscript version of the specification.

The editors of the first version of the DOM HTML module were Mike Champion (ArborText), Vidur Apparao (Netscape), Scott Isaacs (Microsoft, January 1998), Chris Wilson (Microsoft, after January 1998), and Ian Jacobs (W3C).

Glossary

Editors:

Arnaud Le Hors, IBM Lauren Wood, SoftQuad Software Inc. Robert S. Sutor, IBM (for DOM Level 1)

Several of the following term definitions have been borrowed or modified from similar definitions in other W3C or standards documents. See the links within the definitions for more information.

convenience

A *convenience method* is an operation on an object that could be accomplished by a program consisting of more basic operations on the object. Convenience *methods* are usually provided to make the API easier and simpler to use or to allow specific programs to create more optimized implementations for common operations. A similar definition holds for a *convenience property*.

data model

A *data model* is a collection of descriptions of data structures and their contained fields, together with the operations or functions that manipulate them.

DOM Level 0

The term "DOM Level 0" refers to a mix (not formally specified) of HTML document functionalities offered by Netscape Navigator version 3.0 and Microsoft Internet Explorer version 3.0. In some cases, attributes or *methods* have been included for reasons of backward compatibility with "DOM Level 0".

HTML

The HyperText Markup Language (*HTML*) is a simple markup language used to create hypertext documents that are portable from one platform to another. HTML documents are SGML documents with generic semantics that are appropriate for representing information from a wide range of applications. [HTML 4.01]

language binding

A programming *language binding* for an IDL specification is an implementation of the interfaces in the specification for the given language. For example, a Java language binding for the Document Object Model IDL specification would implement the concrete Java classes that provide the functionality exposed by the interfaces.

live

An object is *live* if any change to the underlying document structure is reflected in the object.

tokenized

The description given to various information items (for example, attribute values of various types, but not including the StringType CDATA) after having been processed by the XML processor. The process includes stripping leading and trailing white space, and replacing multiple space characters by one. See the definition of tokenized type.
